Dear All,

The application period is NOW open for SIM and WISE with the deadline of 22 January 2016! Please do not hesitate to forward this to any friend or family member interested in Master's degree studies with us!

The programmes are free of tuition fees for all students! The 2016 intake is likely to be last intake of non-EU/EEA students with no tuition fees, as the Finnish Government is proposing tuition fees for non-EU/EEA students. The programmes will remain free of tuition fees for European students. **Please note that applicants must have a valid English proficiency test; the language test requirements have changed from last year so e.g. a European degree completed in English language does no longer exempt an applicant from the test requirement.**

Kind regards,

Niina Ormshaw, International Coordinator

Faculty of Information Technology

University of Jyväskylä

Looking for a Master's degree in the field of IT in the country of IT innovation?

Do you want to

- be an expert in services and become a high-paid professional?
- have a world-class education in service innovation, management, engineering and web intelligence?
- join leading researchers in the world in their quest to understand what makes web or IT enabled services excel and more successful than others?

The Faculty of Information Technology, University of Jyväskylä, delivers two full-time Master's degree programmes of 120 ECTS, fully taught in English.

The application period is now open with the deadline of 22 January 2016 for studies starting in September 2016!

MSc (Econ.) SERVICE INNOVATION AND MANAGEMENT

- a programme in international IT-enabled service innovation, design and management

See www.jyu.fi/sim for details or scroll down!

&

MSc WEB INTELLIGENCE AND SERVICE ENGINEERING

- a programme in designing intelligent software applications for the web-based service economy

See www.jyu.fi/wise for details or scroll down!

**

Graduates of our programmes will be able think beyond the routine and be able not just to adapt to a change but to be innovators and change catalysts who can manage and engineer new service innovations and technologies; they will also be equipped with good communication skills due to the integrated language and communication studies. Graduates will be eligible to apply for Doctoral level studies.

The University of Jyväskylä (JYU) ranks amongst the best research universities worldwide and is located in Central Finland, the Land of Thousand Lakes, where nature and personal security are amongst our most highly valued assets.

**

Interested? Please see further details in below for our programmes... or follow us on Facebook at

**

Service Innovation and Management (SIM) – “Innovate and Co-Create Service Experiences”

- If you want to become a professional in service innovation and management;

- If you want to know the latest methods and business management tools for creating and managing a successful global service business;
- If you have passion for co-creation of value and developing ultimate service experience for your customers and service users;
- If you already have undergraduate degree in a business, technology or innovation management, industrial engineering, or other relevant field.

... welcome to study in our international Master's degree programme SIM – Service Innovation and Management! The programme is delivered by the Department of Computer Science and Information Systems and our students graduate with a Master's degree award in Economics and Business Administration.

Our graduates will be able to design and develop digital and IT enabled services, business processes, and service ecosystems. The goal of the programme is to enable graduates to champion service innovations in their organisations, to exploit and have knowledge on the latest enabling technologies and tools.

Web Intelligence and Service Engineering (WISE) - “Everything-as-Service Engineering”

- If you want to become a professional in technical design and development of complex and challenging Web-based software systems, platforms and services;
 - If you want to know the latest trends and technologies related to these;
 - If you are already capable of, and love, programming and want to become a real GURU in it.
- If you already have undergraduate degree in computer science, software engineering, information technology, mathematics or other relevant field.

... welcome to study in our international Master's degree programme WISE - Web Intelligence and Service Engineering! The programme is delivered by the Department of Mathematical Information Technology and our students graduate with a Master's degree award in Natural Sciences.

Our graduates will be able to use and engineer complex self-managed Web-based public and industrial systems, digital ecosystems, platforms, services and applications; connect the designs with publicly available data (including Linked and Big Data) and Web-based capabilities as services; figure-out and approach various challenging problems world-wide, which require self-managed service-oriented architectures for their solutions; and understand and professionally utilize for that purpose knowledge on enabling technologies and tools.
